Copyright in relation to this Thesis

Under the Copyright Act 1968 (several provision of which are referred to below), this material must be used only under the normal conditions of scholarly fair dealing for the purposes of research, criticism or review. In particular no results or conclusions should be extracted from it, nor should it be copied or closely paraphrased in whole or in part without the written consent of the author. Proper written acknowledgement should be made for any assistance obtained from this material.

Under Section 35 (2) of the Copyright Act 1968 'the author of a literary, dramatic, musical or artistic work is the owner of any copyright subsisting in the work'. By virtue of Section 32 (1) copyright 'subsists in an original literary, dramatic, musical or artistic work that is unpublished' land of which the author was an Australian citizen, an Australian protected person or a person resident in Australia.

The Act, by Section 36 (1) provides: 'Subject to this Act, the copyright in a literary, dramatic, musical or artistic work is infringed by a person who, not being the owner of the copyright and without the licence of the owner of the copyright, does in Australia, or authorises the doing in Australia of, any act comprised in the copyright'.

Section 31 (1) (a) (i) provides that copyright includes the exclusive right to 'reproduce the work in a material form'. Thus, copyright is infringed by a person who, not being the owner of the copyright, reproduces or authorises the reproduction of a work, or of more than a reasonable part of the work, in a material form, unless the reproduction is a 'fair dealing' with the work 'for the purpose of research or study' as further defined in Sections 40 and 41 of the Act.

Section 51 (2) provides that "Where a manuscript, or a copy, of material of other similar literary work that has not been published is kept in a library of a university or other similar institution or in an archives, the copyright in the material or other work is not infringed by the making of a copy of the material or other work by or on behalf of the officer in charge of the library or archives if the copy is supplied to a person who satisfies an authorized officer of the library or archives that he requires the copy for the purpose of research or study'.

Investigating casual encounters: A systemic functional linguistic and social network model of analysis

Language and society – or, as we prefer to think of it, language and social man – is a unified conception, and needs to be understood and investigated as a whole. Neither of these exists without the other: there can be no social man without language, and no language without social man. (Halliday, 1989:12)

Abstract

This research is concerned with the study of language and the social order. Working within the systemic functional theory of language, and utilising the concept of a social network to model the social order, the primary aim is to put on display the relationship between the linguistic system and social order, between language and culture. Systemic functional grammar (Halliday, 1995; Halliday and Hasasn, 1985/9; Halliday and Matthiesen, 1997; Eggins and Slade 1997), with its emphasis on language as a social semiotic, is used to analyse the language used by a group of four women engaged in casual conversation in a small Australian island community. Here the analysis reveals how the women negotiate their social reality when speaking to each other. It shows how their social relations are shaped within a text (Hasan, 1996), and explores the notion that, despite the seemingly trivial, unconscious nature of casual interactions, power and solidarity are continually being negotiated by the participants (Halliday, 1994; Eggins and Slade, 1997). More specifically, this research examines the notion that through lexico-grammatical and semantic selections participants are able to negotiate dominant positions in interaction. Social Network analysis has been used to examine the relationship between the individual and the group. It offers a quantifiable analytical tool for describing the character of an individual's everyday social relationships (Milroy, 1987). A social network analysis is used in the present study to map the social relationships in the tight-knit network, or speech fellowship, of these women (creating a map of the context of situation in SFL terminology). Change in the social relationships and language choices is modeled by revisiting the participants 15 months later in a contextually similar environment and re-analysing the network and linguistic options. Systemic functional linguistics is then used to highlight the interdependency of language and social order. Through systematic accounts of language and the context in which it is embedded this reciprocal nature is displayed and language and social order can be seen, not as two distinct entities, but rather as one phenomena seen from two different perspectives (Halliday, 1978; Mathiessen, 1993).
DECLARATION

I certify that this work is the result of my own research and that the work has not been submitted for a higher degree to any other university of institution

Acknowledgments

I have had support from many people in the completion of this thesis. Special thanks go to Dr David Butt for agreeing to be my research supervisor and for his continuing interest, inspiration and intellectual support.

I also express thanks to the many people who took part in this research. To the participants and to the many other islanders who gave up their time, showed interest and offered valuable insight into the nature of island relationships. Without such input this work would not have been possible.

In many ways the greatest debt I owe is to my family. My children Jade and Sian who have had to deal with a preoccupied and frequently absent mother. And finally to John McAndrew I am indebted for the support and encouragement to continue and the postponing of his own studies to allow me to complete this work before the birth of our third child.
